Claims

- A substantially pure human nucleic acid comprising at least 40 nucleotides that
 hybridizes under high stringency conditions to a sequence found within the nucleic acid of SEQ ID NO:1.
 - 2. The nucleic acid of claim 1, wherein said sequence has a sequence complementary to at least 50% of at least 60 contiguous nucleotides of the nucleic acid encoding the methionine synthase polypeptide, said sequence sufficient to allow nucleic acid hybridization under high stringency conditions.

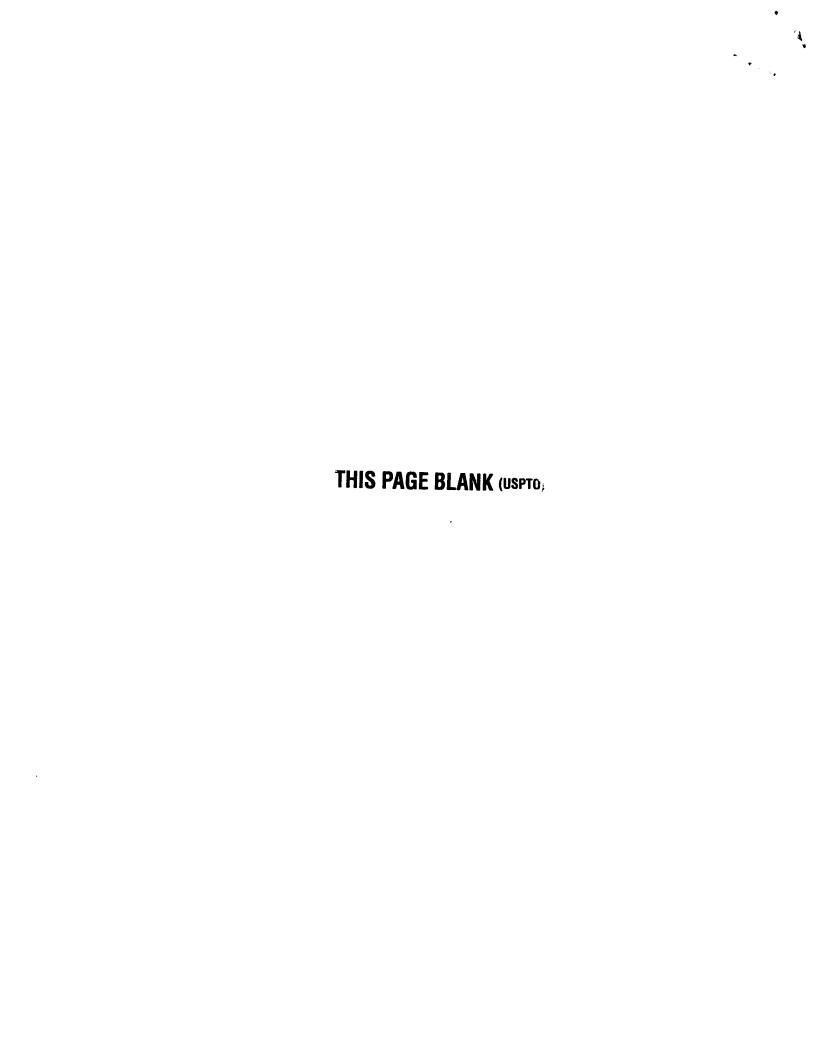

10

- 3. The nucleic acid of claim 1, wherein said nucleic acid comprises a mutation or a polymorphism, wherein said nucleic acid probe detects a mutation or polymorphism selected from the group consisting of D919G, H920D, and ΔIle881.
- 4. The nucleic acid of claim 3, wherein said sequence of said nucleic acid comprises the cobalamin binding domain of the human methionine synthase gene.
- 5. The nucleic acid of claim 2, wherein at least 18 contiguous nucleotides of said sequence are complementary to at least 90% of the corresponding nucleotides of the nucleic acid encoding the methionine synthase polypeptide.
- 6. The nucleic acid of claim 1, wherein said high stringency conditions comprise hybridization in 2X SSC at 40°C.
 - 7. A substantially pure human nucleic acid, wherein the sequence of said nucleic acid is at least 75% identical to the corresponding region of at least 50 contiguous base pairs of the nucleic acid of SEQ ID NO:1.

THIS PAGE BLANK (USPTO)

- 8. A substantially pure human nucleic acid, wherein the sequence of said nucleic acid is at least 35% identical to the corresponding region of at least 50 contiguous base pairs of the nucleic acid of SEQ ID NO:1.
- 9. A kit for the analysis of a human methionine synthase nucleic acid, said kit comprising a nucleic acid probe useful for detecting in the nucleic acids of a human a mutation or polymorphism in said methionine synthase nucleic acid, wherein said mutation or polymorphism is selected from the group consisting of D919G, H920D, and ΔIle881.
- 10. The kit of claim 9, wherein said probe comprises at least 40 nucleotides that hybridizes at high stringency to a sequence found within the nucleic acid of SEQ ID NO:1.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

888888	The present invention relates to a method for assaying an analyte in a sample comprising: contacting the sample with a mutant analyte-binding enzyme which has binding affainty for the analyte or an immediate analyte enzymatic conversion product but has attenuated catalytic activity; and detecting resulting binding. The method is useful in monitoring binding the method is useful in monitoring the biological systems/processes.
38	of the analytes. The present sequence is a coding sequence

                                                                                                                                                                                                                                                                                                             The present invention provides a novel method of estimating the susceptibility of an individual to a developmental disorder using genetic and environmental variables. The method can be used in the diagnosis, prevention and treatment of disorders such as schizophrenia, spina bifida cystica, Tourette's syndrome, bipolar illness, autism, conduct disorders, attention deficit disorder, obsessive compulsive disorder, chronic multiple tic syndrome and learning disorders such as dyslexia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                481

                                                                                                                                        ð
The present invention relates to a method (M1) for estimating the susceptibility of an individual to have offspring that develop a developmental disorder. The method comprises analyzing that develop a and/or proteins from the biological sample, where analyzing results in a partial or full genotype for the alleles of two or more genes involved in folate, pyridoxine, and/or cobalamin metabolism. The present sequence is one such gene involved in folate metabolism. The method is also useful for diagnosing, preventing, and treating developmental disorders, e.g. schizophrenia, autism, attention deficit hyperactivity disorder, or obsessive-compulsive disorder. The protein encoded by the present sequence is also known as 5-methyltetrahydrofolate-homocysteine S-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               344

```
The present invention relates to a method for assaying an analyte in a sample comprising: contacting the sample with a mutant analyte-binding enzyme which has binding affinity for the analyte or an immediate analyte enzymetic conversion product but has attenuated catalytic activity; and detecting resulting binding. The method is useful in monitoring biological systems/processes, or prognosis/diagnosis of disease caused by imbalances of the analytes. The present sequence is a coding sequence used in the present invention. Note: the present sequence is not shown in specification, but was from Genbank, using information given in the specification
                                                                                                                                                                                                                            GICACCIGIGAGAGCACGICITCICIGCCGCCCCTCTGCGCAAGGAGGAGACTCGACA 392

```
This cDNA clone encodes human wild-type methionine synthase (see AAW68594). A survey of the NCBI databases yielded several sequences corresponding to methionine synthases from different organisms.

Comparison of these sequences generated 4 very conserved regions.

Comparison of these sequences generated 4 very conserved regions.

Comparison of these sequences generated 4 very conserved regions.

Degenerate oligonuclectides (see AAV34064-104) based on these conserved sequences are used as printers for RT-PCR with human and mouse mRNA. PCR products were used as printers for RT-PCR with human and mouse mRNA. PCR products were subcloned, sequenced and aligned. Additional sequences were subcloned by further PCR and inverse PCR. The full-length sequence encodes a 1265-amino acid protein of predicted molt. Wt. 141 kDa.

Using FISH, the gene was mapped to human chromosome band 1943. Mutations in this gene are associated with hyperhomocysteinaemia. One missense in this gene are associated with hyperhomocysteinaemia. One missense in patients of the chid complementation group. A polymorphism (1756 A to G) has also been detected. The invention relates to the diagnosis and associated altered risk for methionine synthase deficiency, and associated altered risk for neural tube defects, cardiovascular disease, and colon cancer. Methods for detecting sequence variants for methionine care methods for screening for therapeutic compounds that modulate methionine synthase activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ATGATCCAGCGGGAGGAAGCTAAACGAAGAACACTTCCGAGGTCAGGAATTTAAAGATCAT 240

This invention describes a novel method for the fermentative production of methionine by growing a sulphur-producing Coryneform bacteria that expresses at least one heterologous mucleic acid encoding a protein with methionine synthase (Meth) activity. Methionine accumulates in the medium or the cells. The method can be used to produce an L-methionine.

Containing animal feed additive by culturing an L-Met-producing methioning animal feed additive by culturing an L-Met-producing methioning minal feed additive by collect coid encoding Methi has sequence of the biomass formed and drying the product to produce the feed additive of the biomass formed and drying the product to produce the feed additive composition of granular form. The nucleic acid encoding Methi has sequence content of granular form. The nucleic acid encoding Methi has sequence content glutamicum ATCC 13032. Optionally at least one other gene content methodine biosynthesis pathway (e.g. appartate kinase) is also amplified or mutated so that it is not affected by metabolities. Also at least one metabolic pathway that reduces production of methionine is at least tone metabolic pathway that reduces production of methionine is at least partly switched off (e.g. homoserine kinase, threonine synthase). The method is especially used to produce L-methionine, useful as an additive for animal feeds. More generally sulphur-containing fine chemicals are useful in human and animal nutrition, cosmetics and pharmaceuticals. This sequence encodes a canimal nutrition, encodes in the disclosure of the invention. \$

This invention describes a novel method for the fermentative production of methionine by growing a sulphur-producing Coryneform bacteria that expresses at least one heterologous nucleic acid encoding a protein with methionine synthase (MetH) activity. Methionine accumulates in the medium or the cells. The method can be used to produce an L-methionine containing animal feed additive by culturing an L-Met-producing microorganism, removing water from the resulting broth, removing 0-100% of the biomass formed and drying the product to produce the feed additive in powdered or granular form. The nucleic acid encoding MetH has sequence homology less than 100% with respect to the metH coding sequence of Corynebacterium glutamicum ATCC 13032. Optionally at least one other gene in the methionine biosynthesis pathway (e.g. aspartate kinase, glyceraldehyde-3-phosphate dehydrogenase or 3-phosphoglycerate kinase, is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        also amplified or mutated so that it is not affected by metabolites. Also at least one metabolic pathway that reduces production of methionine is at least partly switched off (e.g. homoserine kinase, threonine dehydratase or threonine synthase). The method is aspecially used to produce L-methionine, useful as an additive for animal feeds. More generally sulphur-containing fine chemicals are useful in human and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     pharmaceuticals. the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for

The invention relates to an isolated nucleic acid comprising any one of

```
proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway crequired for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent product is overexpressed or underexpressed; (12) determining the extent or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required fung discovery programs, or for screening homologous nucleic acids required cut discovery programs, or for screening homologous nucleic acids required required for proliferation in cells other than S. aureus, S. typhimurium,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  10,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240

The inventor relates to an instance and countries of the following any one of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a promoter operably linked to the nucleic acid comprising a promoter operably linked to the nucleic acid conditions a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated or nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway consideration; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway or that has an activity against a biological pathway or the agene product or that has an activity against a biological pathway or agene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound to activity; (11) a culture compound that inhibits the extent to which each of the strains is present in a culture or collection of product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of proliferation of an organism. The antisense nucleic acids required for citizen all activity and proliferation or the solution or the condition of an organism. The antisense nucleic acids required for citizen and activity and the strains for homologous nucleic acids required for citizen and activity and the strains in the strains in the capacity and activity and the strains are capacited and the section of an organism. The antisense nucleic acids required for calcular proliferation to solve the strains are activited and organism. The activited and activity and activity and activity accessed to a compound and activity an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     by present sequence is one of the target

```
The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a pacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3102
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3042
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosa's and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using blochip technology. Sequences ABD01397-ABD17967 represent P. aeruginosa polymucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               769
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     889
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                949
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               352
